1. **PRODUCT DESCRIPTION**

1.1 **Description**

The specification for asphalt cements (AC) applies to asphalts specially prepared as to quality and consistency for direct use in the manufacture of hot-mix asphalt concrete pavements. Asphalt Cements are specified by the following grades: 150-200(A), 200-300(A), 300-400(A), 400-500(A), 200-300(B) and 300-400(B).

1.2 **Composition/Characteristics**

Asphalt Cements shall consist of fluxed or unfluxed asphalt specially prepared as to quality and consistency and having a penetration at 25°C as specified herein for each grade, under a load of 100 grams applied for 5 seconds. All Asphalt Cements shall be homogeneous and uniform in character throughout. They shall be free from water and other impurities and shall not foam when heated to 175°C.

1.3 **Application/Use**

The Asphalt Cements described herein shall be suitable for use as outlined in Table 1: Principal Uses of Asphalt Materials of the National Standard of Canada CAN/CGSB 16.6-M89, PRINCIPAL USES AND TERMINOLOGY FOR ASPHALT MATERIALS FOR ROAD PURPOSES.

1.4 **Method of Production**

All Asphalt Cements shall be prepared by refining of crude petroleum by suitable methods. If the supplier elects to incorporate non traditional material components in their asphalt cements such as additives, waste products or by-products of other industrial and manufacturing processes, the Province must be advised in writing before any material is supplied.
1.5 Definitions

Asphalt Cement: Dark brown to black solid or semi-solid cementitious material which gradually liquifies when heated. One type of bitumen that is obtained as residue in refining crude oil.

Bitumen: Any mixture of hydrocarbons of natural or pyrogenous origin or both which is completely soluble in carbon disulphide.

2. PRODUCT SPECIFICATION

2.1 General Requirements

2.1.1 Uniformity

All grades of Asphalt Cement described herein shall be free of contamination and shall be homogeneous and uniform in character throughout.

2.1.2 Delivery

The specified material shall be delivered in accordance with the Department’s Specifications for Manufactured Materials SMM 104 General Provisions for Asphalt Supply Contracts.

2.1.3 Prequalification Samples

First time suppliers of products described in the specification shall comply with the prequalification requirements described in SMM 104.
### 2.2 Material Characteristics and Properties

NOTE: THERE ARE NO MAXIMUM VISCOSITY LIMITS FOR "A" GRADE ASPHALT CEMENTS
3. QUALITY ASSURANCE

3.1 Samples

Samples for quality assurance testing will be collected in accordance with Standard Testing Procedure (STP) 102 Sampling Asphalt Materials.

3.2 Testing

3.2.1 Sample Preparation

The samples shall be heated and stirred prior to pouring individual test samples to ensure a homogeneous and uniform character throughout.

3.2.2 Pay Reduction Tests

The Province has the option to do any one or more of the tests listed in Table 1 on any sample obtained by it. Pay reductions will be based on the results of the tests performed.

If a test result is found to fall outside of the specification limits, a second test will be done on another portion of the same sample and the results averaged to assess the pay adjustment.

Should the duplicate test results differ by more than the tolerances for repeatability stated in 3.2.3 of this specification, then the average of the two test values shall not be used and instead the test result numerically nearest the specification limit shall govern.

3.2.3 Interpretation of Results

The criteria for judging the acceptability of test results for each property specified herein shall be the tolerances for repeatability specified in the most recent American Society for Testing and Materials (ASTM) Standard Test Method for that property.
3.2.4 Loads on which no tests are performed or where tests have not been made within four weeks of the sampling date, will be accepted without pay adjustment.

3.3 **Acceptance and Rejection**

Pay reductions on asphalt cements which do not meet specification will be calculated as outlined in the attached form - FORM FOR DETERMINING THE PAY REDUCTION FOR ASPHALT CEMENT THAT DOES NOT MEET SPECIFICATION.

4. **MEASUREMENT**

Measurement of asphalt cement will be in accordance with SMM 104.

5. **DELIVERY**

Delivery of asphalt cement will be in accordance with SMM 104.

6. **PAYMENT**

Payment for asphalt cement will be in accordance with SMM 104 and the following:
